TECHNICAL CAPABILITIES

Languages Fluent in English, German
Reading, some speaking in French and Spanish.

Molecular Biology Cloning in plasmids and expression of cloned gene products in *E. coli* and yeast.
Standard techniques include oligonucleotide-directed mutagenesis, agarose and

acrylamide gel electrophoresis, Southern and Northern analysis of DNA and RNA, Western analysis of proteins, nick-translation and end-labeling of DNA, isolation and purification of DNA from microorganisms.

Biochemistry	Purification and characterization of native and recombinant DNA-derived enzymes. During last five years special emphasis on identification, purification and characterization of the properties of thermophilic DNA polymerases. Standard techniques include liquid chromatography, ELISA, enzyme activity assays, two dimensional gel analysis, and protein assays.
Virology	Tissue culture of primary cells and cell lines. Cultivation of virus on eggs.
Microbiology	Batch- and continuous-culture fermentation of <i>E. coli</i> and yeast. Standard microbiology techniques include handling of pathogenic strains.
Chemistry	Detection and quantification of drugs and poisons in human tissue, blood, and urine. Standard methods include IR- and atomic absorption spectroscopy.
